

What's Next?

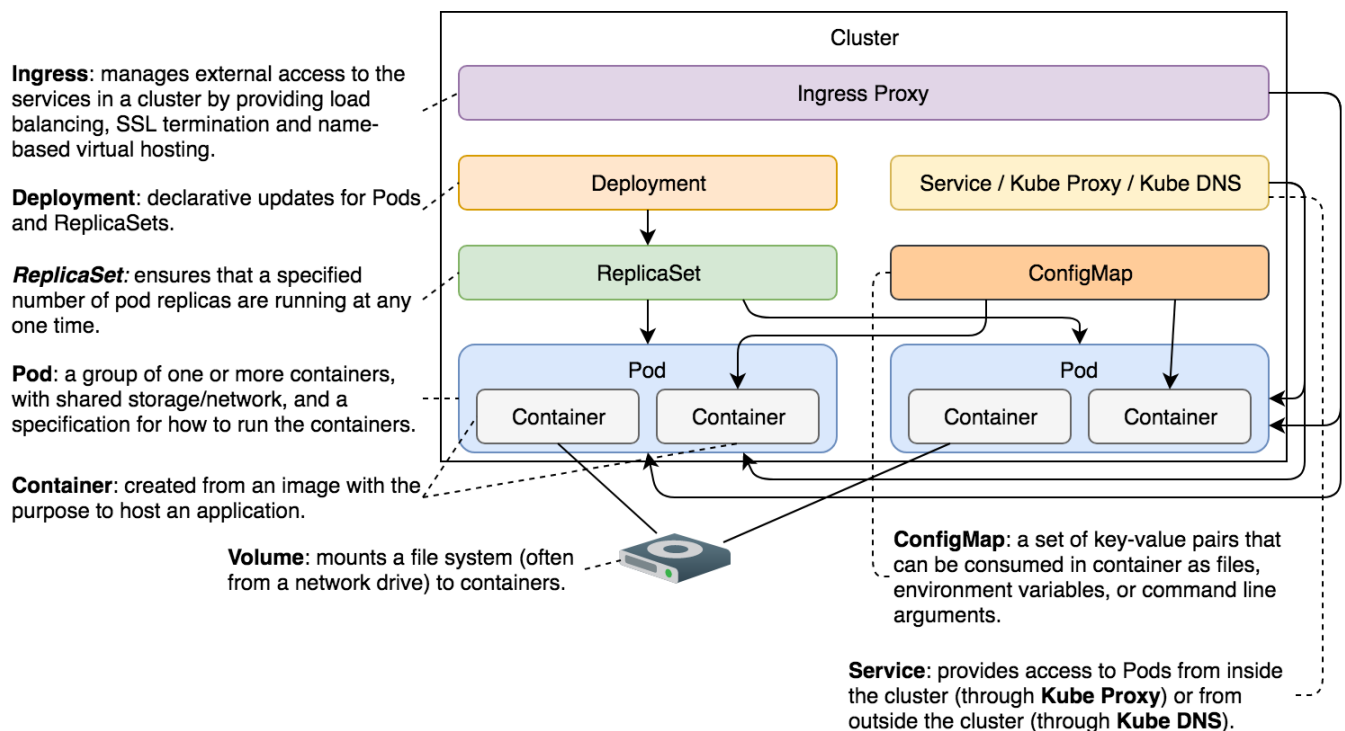

This lesson summarizes what we have learned so far and what we are going to learn next.

WE'LL COVER THE FOLLOWING ^

- Summary
- Destroying Everything

Summary

In this chapter, we explored ConfigMaps and learned to inject configurations from various sort of sources including single files, multiple files, literals, and environment files. We also discussed the ways of configuring your applications.

The components explored so far

The above illustration shows and defines Kubernetes components explored so far.

Destroying Everything

For now, we'll destroy the cluster we used in this chapter.

```
minikube delete
```

❗ If you'd like to know more about ConfigMaps, please explore [ConfigMap v1 core](#) API documentation.

The next chapter will explore something very similar to ConfigMaps. The significant difference is that we'll be more secretive this time.

In the next lesson, we will compare the Kubernetes configMaps to Docker Swarm equivalent.
